Nombre: José Garbán

1 Sistema Multiagente para la simulación del tráfico aéreo

Características del modelo:

El modelo fue elaborado en MESA (Python), que es el lenguaje más conocido por el autor. Se utilizó un Jupyter Notebook para guardar los resultados de forma que se puedan ver los estados paso a paso. Está basado en un ejemplo del mismo paquete MESA llamado “boid_flockers”, un simulador del movimiento de enjambres de aves que evitan chocar entre sí.

En “boid.py” se encuentran los modelos de los aviones (subclase del modelo de las aves en el ejemplo “boid_flockers”) y de los aeropuertos. El código está disponible en: <https://github.com/josegarban/mesa-airport>.
